Dear Dennis,

As a driver, safety has always been a top priority in my racing career. After having survived a horrific, fiery crash, I inevitably felt the need to inspect the safety aspect of my racing program. While I felt 100% confident in the functionality of my safety equipment, I questioned if there was a system designed to ensure that the functionality of my equipment didn't diminish throughout the season(s). I found that answer in the Molecule Fabric Care System.

In the past, dry cleaning was the route taken for most of the equipment. Not only was it expensive, but I was unsure of how effective the dry cleaning process was in regards to maintaining the safety value of the equipment. Well, the expensive dry cleaning is gone and I no longer worry about the safety value of my equipment now that I wash all of my Nomex safety equipment using the Molecule Fabric Care System. The whole system, including the Molecule Wash, the Molecule Protector, the Molecule Refresher, and the Molecule Spot Cleaner, keeps all of my gear clean, fresh, looking good but most importantly, the system allows it to maintain its' safety functionality.

Sincerely,

A handwritten signature in cursive script that reads "Johnny Scarborough".
