

## Molecule Repels The Canadian ChampCar Rain In Mont-Tremblant and Toronto

*As Pacific Coast Motorsport drivers and crew deliver their best-ever performance at Toronto, Molecule Labs keeps the team dry and performing at their peak in a downpour*

Coming off a two week stretch of rain-soaked events in Eastern Canada, the Pacific Coast Motorsports/Molecule Labs team of Alex Figge and Ryan Dalziel had more to overcome than just their fellow ChampCar competitors in the battle for success; unrelenting skies at Mont-Tremblant and then Toronto challenged the PCM pit crew and drivers to deliver top performances in the wet.

With all of their fireproof Nomex® fire suits laundered and treated with the full range of technical fabric care products from their team partner, Molecule Labs, the PCM team had an advantage the rest of the ChampCar field would have loved to have had: Molecule's liquid repellency traits that kept their suits dry while their own suits were soaked to the core.

"The weather was so unpredictable in both races," commented PCM Team Manager, Tyler Tadevic, "all the teams and drivers were scrambling to remain dry as the rain fell throughout both races. Alex,

Ryan, and our entire pit crew had it easy as the water would just bead up, and roll off our backs."

Armed with MOLECULE™ WASH and MOLECULE™ PROTECTOR fire suit treatments, the cleaning agents within WASH and liquid repelling agents within PROTECTOR allowed Dalziel and Figge to give their full attention to the treacherous racing tracks while the competition sat in soggy fire suits as the falling rain was absorbed by their untreated suits.

"I've been in a lot of rain races, and there's nothing worse than trying to battle for position while wearing a water-logged suit," noted Molecule's owner and founder, Michael Guasch. "MOLECULE™ PROTECTOR does an incredible job of repelling flammable liquids when they contact Nomex® material, but in this case, it locked out the water and kept the PCM team and drivers focused and dry. Their suits were refreshingly clean and even smelled great after the race because of MOLECULE™ WASH."

PCM's Ryan Dalziel led the team's first race at Toronto, and was on target for a podium finish but for some over-aggressive driving by a competitor in the final stages of the race. Despite this, the realization of PCM's potential and that of Molecule's product line were seen both on and off the track. "We're incredibly proud of what Ryan, Alex, Tyler, and the entire Pacific Coast team achieved last weekend at Toronto, said Guasch. "I have no doubt that in the coming races, the momentum of the PCM/Molecule ChampCar team will continue to grow.
